*Lapland Knife Company*

Caström is a small but ambitious company based in Swedish Lapland. We believe that spending more time in contact with nature makes us all more balanced and we strive to contribute to this aim. We do this by developing products that are inspiring to use. Our designs are rooted in the Scandinavian knife making and outdoor tradition but with amendments and modern elements based on user feedback and tests. In Sweden, there is a long standing tradition of making outdoor equipment displaying outstanding performance, quality and craftsmanship.

We aim to balance innovation and improved production efficiency with the Swedish traditional design and craftsmanship to meet higher performance standards and offer more value.

We also believe that our way of doing business which is based on seeking to always improve products, services and the relationships over the long-term can contribute to a better and more sustainable world.

# CASSTRÖM LARS FÄLT KNIFE

## Lars Fält Knife

The Lars Fält knife is the result of a collaboration between Casström and Survival and Bushcraft legend Lars Fält. It is a very sturdy Bushcraft knife made with features that Lars has tested and perfected over a life time of knife use and experience.

The knife has a full-tang construction with the blade measuring approx. 11,5cm long with a straight and fairly round handle made to suit both large and small hands. The leather cord for the handle and a strong leather sheath is included.

The blade is made of around 3,5mm thick Böhler K720 high carbon tool steel (58-60HRC) to make the blade extremely durable for heavy use such as log-splitting, or so-called "batoning" without making the knife too heavy or uncomfortable to carry.

The knife has a Scandinavian grind to make it very robust, whilst at the same time easy to carve wood with or sharpen on a small flat whetstone/sharpener in the forest. The knife is a really good all-round tool for forest use.

The handle is made of high grade Curly birch with black fibre liners.

**No. 11804 - Curly birch handle, 11.5cm K720 Blade/Scandi, sheath**

## About Lars Fält

Lars Fält is a living legend when it comes to Survival and Bushcraft. Special forces and civilians from all over the world have been training with Lars as their Survival instructor and his methods are well tested in the field. Lars' passion for Bushcraft has lead him along winding trails and long canoeing trips all over the world. Exciting stories and great knowledge is also to be found in his books published through the years. He founded the Swedish Armed Forces Survival school and was in charge there for many years. Lars Fält has significant experience training paratroopers and rangers in the Swedish Army and he has been trained as a survival instructor by British SAS and American Special Forces.

He has been involved in survival training all over the world and during his travels he has met many local and indigenous people with deep knowledge of the nature, which has meant a lot to him and allowed him to develop even better respect and knowledge of traditional methods and ways of life.

# CASSTRÖM SAFARI - MINI HUNTER KNIVES

## Casstrom Safari - Mini Hunter Knife - Designed by Alan Wood

Safari - a small but competent knife from Casström. Designed by renowned English custom knife maker Alan Wood known for his handmade Bushcraft and Deer Stalking knives. A compact hunting knife featuring a 6cm stainless steel blade with a hollow grind. The blade is made using a full tang construction, features a tapered tang and is made in 12c27 Swedish Stainless steel (HRC 59). The tapered tang and shape of the handle makes the knife very nicely balanced and comfortable. Available in stabilized curly birch, Black or Orange G10. All these materials are tough, water resistant and low maintenance. The design in combination with the materials used makes this a very beautiful but highly resilient piece of kit. Ideal as a small skinner for deer and as a small belt knife for safari hunters.

**No. 10618 - Stabilised Curly Birch, Brown Leather Sheath**

**No. 10620 - Black G10, Brown Leather Sheath**

**No. 10630 - Orange G10, Brown Leather Sheath**

### About the designer:

Alan Wood has been a professional knifemaker since 1985 and has become the UK's most emulated craftsman due to his practical and attractive designs. Also well known for his collaboration with survival expert Ray Mears.

### About the design:

*"The initial concept was to attempt to design a hunter's knife that produced a tool of minimum dimensions which was still efficient in use. At first it was for the large proportion of British deerstalkers who hunt for the smaller species such as roe and muntjac. However, it was picked up by others such as the Swedish hunter Jeppe Stridh as an ideal cutting tool for his country's elk hunters in combination with a forest axe. Further research has shown that it is an adequate and popular compact belt accessory for those on safari, hence the name. Basically, an easily carried tool that can be used to remove the viscera and to perform basic skinning to save a trophy cape when far from the vehicle's tool kit."*

/ Alan Wood

The handle has a unique tapered tang for improved balance in accordance with the designers specifications

Comes with a sturdy leather sheath.

## Casström Woodsman Knife - Designed by Roger Harrington

A classic wilderness knife designed by custom knife maker Roger Harrington of England.

A full-tang knife with a blade measuring approx. 9cm long, straight and fairly round handle made to suit both large and small hands. The leather cord for the handle and a strong deep pocket leather sheath is included.

The blade is made of around 4mm thick Böhler K720 high carbon tool steel (58-60HRC) to make the blade extremely durable for heavy use such as log-splitting, or so-called "batoning" without making the knife too heavy or uncomfortable to carry.

The knife has a Scandinavian grind to make it very robust at the same time easy to carve wood with and easy to sharpen on a small flat whetstone/ sharpener in the forest. The knife is a really good all-round tool for field use.

The handle is made of Curly birch or approx. 5000 year old English bog oak. The bog oak has a rough texture and the colour tone can vary from pitch black to dark brown or grey.

**No. 10804 - Curly Birch, 9cm K720 blade/Scandi**

**No. 10809 - Bog Oak, 9cm K720 blade/Scandi**

**No. 10824 - Curly birch, 9cm K720 blade, matching Fire steel combo**

**No. 10829 - Bog Oak, 9cm K720 blade, matching Fire steel combo**

### About the designer :

Roger Harrington is an experienced outdoorsman and knife maker who has taught Bushcraft and survival to civil and military customers for the last twenty years with his company Bison Bushcraft in Sussex, England.

# CASSTRÖM No.10 SWEDISH FOREST KNIFE

## With Scandinavian Grind - For Bushcraft and heavy use

A multi-purpose knife for hunting, bushcraft and general use in the great outdoors. The blade is 10cm long and made using 3.8mm thick Böhler K720 high carbon tool steel (HRC 58-60) or Swedish Sandvik 14C28N Stainless steel(HRC 57-59). These steels in combination with the Scandinavian grind makes these knives very strong, yet very easy to sharpen and they easily take a great edge. There are black fibre liners between the handle scales and steel to enhance durability over time. The wood has been finished with a traditional Scandinavian linseed oil based finish and comes with a sturdy welted sheath made from cognac brown or black 3mm vegetable tanned full-grain leather. The sheath features an extra wide belt loop and a fluid draining hole.

## With Full Flat Grind - For Hunting and lighter use

The full flat grind version features the same spec as the above made using Swedish Sandvik 14C28N stainless steel. This steel in combination with the full flat grind make this model a very good cutter and slicer ideal for hunting, fishing and general outdoor use. The model is available in stabilized curly birch wood (blue or natural), Black Micarta or Orange G10. All these materials are tough, water resistant and low maintenance. Comes with a sturdy welted sheath made from cognac brown or black 3mm vegetable tanned full-grain leather. The sheath features an extra wide belt loop, a fluid draining hole and a lanyard hole.

## Swedish Forest Knife with Combo sheath and Fire Steel

The SFK range is also available with combo sheaths and fire steels. Available in Carbon (Bohler K720) or stainless steel (Sandvik 14c28n).

**No. 10101**

**No. 10102**

**No. 10103**

## Caström No.3 Dangler

The No.3 Dangler is an accessory to let your knife hang further down from the waist, allowing more freedom of movement and making handling on and off the belt smoother. With a Dangler the knife can be easily accessed even when you have a jacket on or a large backpack with a hip belt and it is easy to sit down without the knife getting in the way. When the sheath hangs it can be bent at the height of the hip joint which allows the knife to smoothly follow your legs movement if attached at the bottom by a cord - you can run, climb and bend almost without noticing the knife.

The D-ring is a carabiner and thus allows you to take the knife off without having to open your belt. It is made of sturdy 8mm thick aluminum and in tests the breaking strength has exceeded 400kg. It can also be utilised to hoist up equipment, pull an animal, anchor a dog leash to your waist or suspend a tarp or hammock. Note that the D-ring should not be used for climbing since a fall can create forces that far exceed 400kg even if the person is not heavy. The belt loop is made of sturdy 3mm thick vegetable tanned cowhide available in Cognac Brown, Black or Dark brown. The loop can take belts with a width up to 6cm. The Dangler's D-ring will take knife sheaths with a belt loop up to 34mm wide.

**No. 10101 - Dangler with Cognac Brown Leather loop**

**No. 10102 - Dangler with Black Leather loop**

**No. 10103 - Dangler with Dark Brown Leather loop**

**No. 10109 - Dangler with Black Leather Loop and Black D-ring**

## Caström Knife Making Kits

The SFK range is also available as make your own kits.

**No. 14000 - 10cm blade, K720 carbon steel, curly birch scales, corby rivets**

**No. 14001 - 10cm blade, Stainless 14c28N steel, curly birch scales, corby rivets**

**No. 14004 - 10cm blade, Stainless 14c28N steel, green micarta scales, corby rivets**

**No. 14005 - 10cm blade, K720 carbon steel, green micarta scales, corby rivets**

**Blade blanks of all models are also available!**

## Casstrom Field Saws

The Casström Field Saw allows you to open the chest cage and pelvic bone on larger game safely and quickly without puncturing the gut or causing unintended damage. The teeth on the saw have been precision ground for fast and efficient cutting.

The end of the blade is rounded off and features a safety tip.

The saw blade is made using a high quality stainless blade steel that makes the saw very durable but also easy clean in a hygienic way. The handle and saw blade have been designed in a unique way to allow the blade to be replaced if worn out. The handle is made from precision milled, impact resistant and weatherproof G10 laminated glass fibre. This material does not absorb any blood or liquids and is very strong and durable.

The saw comes with a sturdy Cordura nylon belt pouch. The steel used for the blade has been carefully selected and tested to meet high standards set for cutting efficiency as well as strict hygiene requirements for handling food.

To change the blade, simply unscrew the four security screws/bolts, separate the two handle scales and replace the blade. Please note that the three screws closest to the blade will only unscrew from the front of the handle (with Casstrom logo facing you) as the bolts inserted from the back are fixed in their position. The fourth screw and bolt at the end of the handle may require two allen keys/hex tools to be undone.

**No. 132768 - No 7 Orange**

**No. 133161 - No 11 Orange**

**Spare nylon pouch available upon request!**
