

Please see our website for a range of standard services we offer.

Sight Impaired Support Services

As with our support for the over 50's, we will be making a concerted effort to provide information and support to the visually impaired.

Nearly 2 million people in the UK are suffering from a form of sight loss and this is increasing, estimated figures indicate that by 2030 this could hit 2.7 million and double to 4 million by 2050.

Hugh efforts are being made to provide technical assistance to provide help with this issue, and we are confident that many will benefit if aware of the available technology.

- **Free Home Consultations and demonstrations** will also provide cost free solutions, taking advantage of:
 - Microsoft accessibility improvements
 - Voice recognition improvements
 - Text to Speech options
 - Screen magnification
 - Talking Goggles

Along with a host of other available innovation.

We have found that the majority of cases can be helped with standard cost-free changes, however each person's requirements are often unique, and it is our objective to provide bespoke solutions to not just assist but greatly enhance the situation.

It is difficult to fully appreciate the life changing experience that may be only round the corner. We are convinced that many of our free consultations will greatly benefit the recipient and is often the case following their understanding and implementation, friends and Family once seeing the recipients improved access and abilities, also take advantage of these enhancements.
