

Sonography

Specialists in Ultrasound Imaging

OUR MISSION

Harmonic Medical Sonography enables patients to access high quality affordable ultrasound scans flexibly and within shorter waiting times. We enable patients and their healthcare professionals to manage majority of health problems locally and timeously by providing an exemplary service. We do this by endeavouring to get it right the first time, every time and meeting or exceeding expectations.

OUR VALUES

Harmonic Medical Sonography believes that

- the care of our patients takes precedence over all other things
- challenges provide an invaluable learning experience from which great benefit can be derived for the future
- honesty and integrity are vital ingredients of everything we say and do
- dignity and confidentiality of every patient must be maintained at all times
- everyone deserves the highest possible standards of excellence in diagnostic and screening services

OUR KEY OBJECTIVES

- to achieve accurate diagnoses and screening results and where necessary suggest follow-up or referral.
- to deliver a person centred service.

Sonography

Specialists in Ultrasound Imaging

- to offer as much flexibility of the service as possible allowing patients to use the services offered to complement their NHS care.
- to promote lifelong learning and development of our staff.

OUR SERVICES

Service

Description

General
(Abdominal)
Scans

A survey of the abdomen, to look at the liver, the bile ducts, the gallbladder, pancreas, kidneys, spleen and aorta

Kidneys (Urinary)
Tract Scans

A detailed scan of the kidneys, bladder, and prostate (in males)

Gynaecological
(Pelvic) Scans

A detailed scan of the uterus (womb), endometrium (lining of the womb), and ovaries

Pregnancy
(Obstetric)
Scans [not
available]

Determine if a baby is present, check for multiple pregnancy, position of the baby, help determine the age, and sometimes gender of the baby and due date, may diagnose abnormalities, monitor the health and development of the baby

Musculoskeletal
Scans

To assess muscle, joint, tendon & ligament disease such as tears, inflammation or damage to joints that may be causing debilitating pain in the shoulder, arm, elbow, wrist & hand, groin (for hernias), hip, leg, knee, foot & ankle.

Harmonic Medical Sonography

NHS

Specialists in Ultrasound Imaging

Service

Description

Soft Tissue Scan

[not
offered]

To investigate a wide range of soft tissue lumps such as benign lipomas or malignant tumours i.e. sarcomas and metastases including superficial lymph nodes. We provide specialist advice to enable you to progress into the correct care pathway straight away.

Peripheral Nerve Scan

Careful scanning of peripheral nerves enables analysis of their anatomic relationships with surrounding structures. This is essential for recognizing nerve disorders such as carpal tunnel syndrome (wrist), tarsal sinus syndrome (foot) and others

Small Parts (Neck) Scans

To assess many of the superficial organs such as the thyroid gland for goitre, lumps, tumours and malfunctions; the salivary glands for pain, swelling, inflammation, stones, tumours, etc

Specialists in Ultrasound Imaging

Service

Description

Small Parts
(Scrotum)
Scans

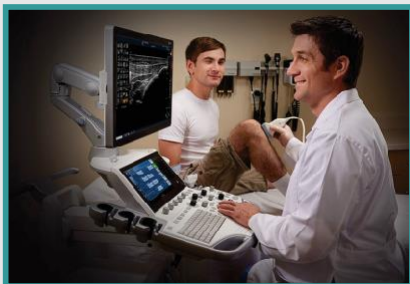

To diagnose suspected abnormalities of the scrotum such as problems of the testes, epididymes and surrounding tissues typically pain, swelling and lumps in the scrotum

Vascular
(DVT) Scans

To scan the major blood vessels in the abdomen, neck, arms and legs to check for blood clots, plaque or emboli. Can also check for aneurysm. Helps plan for effective treatment.

Joint
Injections
[not offered]

To scan and accurately guide steroid injections into the correct joint space and surrounding soft tissues as an effective treatment for painful joints
